Chairs' Welcome

Welcome to the 27th International Conference on Knowledge-Based and Intelligent Information & Engineering Systems (KES 2023), organised by KES International and held in Athens, Greece, 6-8 September 2023.

KES 2023 is the 27th event in a series of broad-spectrum intelligent systems conferences first held in Adelaide, Australia in 1997. The main aim of this KES conference series is to provide an internationally respected forum for the dissemination of research results and the discussion of issues relating to the theory, technologies and applications of intelligent engineering and information systems. The conference is rated 'B' under the CORE conference ranking system.

We are pleased to be able to hold this conference in the breath-taking Royal Olympic Hotel, located within the centre of the city. The venue directly overlooking the Temple of Zeus and National Garden, with grand views of Acropolis and other archaeological sites. Its rooftop terrace provides the perfect viewing platform to see the city in all of its natural beauty.

Although the conference is intended to be mainly a live event with physical attendance, delegates unable to take advantage of the opportunity to visit this wonderful location can present virtually over the KESonline platform.

This truly international conference attracted submissions from a substantial number of researchers and practitioners from all over the world, who submitted their papers to four general track sessions and 50 special sessions. A large number of submissions was received and each paper was peer reviewed by at least two members of the International Program Committee. From them, 512 high-quality papers were accepted for oral presentation and publication in *Procedia Computer Science*, submitted for indexing in Conference Proceedings Citation Index (CPCI), Scopus and INSPEC.

The conference chairs would like to express their gratitude to the Keynote Speakers:

Prof. Dr. Nikolaos G. Bourbakis, Wright State University, USA, title of talk: *'Knowledge-based Navigation of Autonomous Robots'*;

Prof. Manolis Koubarakis, National and Kapodistrian University of Athens, Greece, title of talk: *'Question Answering over Geospatial Knowledge Graphs'*;

Prof. Lyudmila Mihaylova, University of Sheffield, Sheffield, United Kingdom, title of talk:

'Machine Learning Methods for Sensor Data Fusion and Autonomous Systems';

Prof. Ireneusz Czarnowski, Gdynia Maritime University, Poland, title of talk: *'Processing of difficult data for machine learning'*;

Prof. Nobuyuki Ogawa, National Institute of Technology (KOSEN), Gifu College, Japan, title of talk: *'The Potential and Challenges of the Metaverse'*.

We would like to acknowledge the Programme Co-Chairs, the General Track chairs, and the International Programme Committee members and reviewers for their valuable efforts in the review process, helping us to guarantee the highest quality possible for the conference. We would also like to thank the organisers and chairs of the special sessions which make an essential contribution to the success of the conference. Lastly, we would like to thank all the authors, presenters and delegates for their valuable contribution and the Local Organising Committee for making arrangements in Athens and making this an extraordinarily successful event.

KES International hopes and intends that KES2023 will make a significant contribution to international research collaboration and understanding, an essential task for the promotion of scientific joint work and excellence.

Knowledge-based Navigation of Autonomous Robots

Abstract: The field of autonomous robots has been drastically revolutionized during the last five decades, with major contributions at all levels. A significant contribution to this evolution has been coming from advances in Computer Science and, especially, from the Artificial Intelligence (AI) community. Indeed, new methodologies and synergies have been developed from different sub-areas of AI, including the sub-area of Knowledge-Based and Intelligent Information & Engineering Systems (KES) and its applications. Machine Learning Methods for Sensor Data Fusion and Autonomous Systems

Abstract: There is a fast development of different machine learning methods – for object classification, tracking, action recognition and other tasks with multiple types of data – from images and videos to data from wireless sensor networks. Autonomous image and video analytics faces a number of challenges due to the huge volumes of data that sensors provide, the changeable environmental conditions and other factors. However, it is important to know when the methods work well and when they are not reliable, e.g. how much could we trust the obtained results? How could we characterise trust is a related question. How could we quantify the impact of uncertainties on the developed solutions? This talk will discuss current trends in the area of machine learning and show results for image and video analytics for autonomous systems.

This talk will present recent results on automated behaviour analysis for decision making. Recent results for automated video analytics will be presented with Gaussian process methods, deep learning and other methods. Their pros and cons will be discussed. Some of these results are part of Digital twins, recently developed new tools that incorporate machine learning and artificial intelligence methods. This talk will discuss the big potential of Digital Twins, the opportunities and challenges that they bring.

The Potential and Challenges of the Metaverse

Abstract: In recent years, constructing a near-future society using metaverse, digital twin, IoT, and AI technologies has been explored as promising to achieve a more efficient and sustainable world. At the same time, technical issues and problems related to data security and privacy are discussed, along with new technologies such as NFT (Non-Fungible Token) technology with a high degree of security safety. We have received competitive funding from the Japanese government for research on metaverse, which is also related to XR, such as VR and AR in Society 5.0. "Society5.0" is a term coined by the Japanese government to describe their vision for a new society that balances economic advancement with the resolution of social challenges by integrating cutting-edge technologies such as metaverse, AI, IoT, and big data into various aspects of people's lives. The goal is to create a human-centered society that enhances the quality of life, promotes sustainability, and empowers individuals to achieve their full potential. This keynote presentation will describe the possibilities and challenges of the metaverse. For example, education can be transformed into a highly interactive and immersive experience in the metaverse. Rather than simply reading textbooks or watching lectures, learners can engage in virtual environments that simulate real-world scenarios and allow hands-on learning. Education in a metaverse offers a new and exciting way for learners to engage with content and acquire knowledge and skills. We expect to see even more innovative educational approaches in virtual environments as technology evolves.

KES TRANSACTIONS -- THE KES OPEN ACCESS LIBRARY

KES Transactions is a book series containing the results of applied and theoretical research on a range of leading-edge topics. The series accepts conference proceedings, edited books and research monographs. Papers contained in KES Transactions may also appear in the KES Open Access Library (KOALA), our own online gold standard open access publishing platform.

TRAINING AND SHORT COURSES

KES can provide live and online training courses on all the topics in its portfolio. KES has good relationships with leading universities and academics around the world, and can harness these to provide excellent personal development and training courses.

DISSEMINATION OF RESEARCH RESULTS

It is essential for research groups to communicate the outcomes of their research to those that can make use of them. But academics do not want to run their own conferences. KES has specialist knowledge of how to run a conference to disseminate research results. Or a research project workshop can be run alongside a conference to increase dissemination to an even wider audience.

THE KES-IKT KNOWLEDGE ALLIANCE

KES works in partnership with the Institute of Knowledge Transfer (IKT), the sole accredited body dedicated to supporting and promoting the *knowledge professional*: those individuals involved in innovation, enterprise, and the transfer, sharing and exchange of knowledge. The IKT accredits the quality of innovation and knowledge transfer processes, practices activities, and training providers, and the professional status of its members.

ABOUT KES
